 AB 2,3-Dihydroxypropyl cellulose or 3-(2,3-dihydroxypropoxy)-2-hydroxypropyl cellulose phosphoric ester (part of which may have undergone carbamidation) is prepared and used as a metal-absorbing material. The metal adsorbent has a high metal-adsorbing ability and a high metal adsorption rate per unit weight. It has an excellent mech. strength and is highly effective in softening water or the like. It significantly efficiently removes heavy metals from wastewater, etc. It has excellent processability and can be formed into various shapes. It is applicable in a wide range and easily reusable.

AB The invention relates to a cellulose II phosphate ester which may be partially reacted with carbamide; and a metal-adsorbing material using the cellulose II phosphate ester. The cellulose II phosphate ester can adsorb a metal ion in a solution with good efficiency, and thus, can be utilized in a metal adsorbing material and in a metal adsorbing apparatus

L8 ANSWER 1 OF 3 HCAPLUS COPYRIGHT 2007 ACS on STN
ACCESSION NUMBER: 1979:593953 HCAPLUS <<LOGINID::20070412>>
DOCUMENT NUMBER: 91:193953
TITLE: Heavy metal ion adsorbents having thioamide groups
AUTHOR(S): Kaeriyama, Kyoji
CORPORATE SOURCE: Res. Inst. Polym. Text., Tsukuba, 300-21, Japan
SOURCE: Journal of Applied Polymer Science (1979), 24(5), 1205-13
CODEN: JAPNAB; ISSN: 0021-8995

DOCUMENT TYPE: Journal
LANGUAGE: English

AB Polymers containing thioamide groups for scavenging heavy metals from water were prepared by P2S5-sulfurization of cyanuric chloride-dicarboxylic dihydrazide copolymers (polyhydrazides) or of copolymers containing di-Me acrylamide or acrylamide or by reaction of methylolated thiourea, thiosemicarbazide, or alkylthiourea derivs. with active-H-containing polymers, e.g. polyethyleneimine (I), cellulose (II), I-II copolymers, or aminoethyl cellulose. Thus, carbodihydrazide-cyanuric chloride copolymer-P2S5 reaction products removed 100% Hg2+ from water containing 10 ppm Hg2+ and 10% NaCl(pH 4) after remaining in contact with the water overnight.

AB Phosphate-dependent enzymes, e.g. glucose 6-phosphate dehydrogenase, pyruvate kinase, or ribulose diphosphate carboxylase (I), were isolated from crude enzyme solns. by adsorption on a phosphate group-containing adsorbent [cellulose phosphate or phosphorylmethyl cellulose (II)] and elution with a phosphate group-competing substrate, coenzyme, or inhibitor. Thus, *Candida utilis* was autolyzed with AcOEt, extracted with (NH4)2SO4 solution, the solution purified on a Sephadex G-25 column and subsequently on a DEAE-cellulose column. The crude I solution obtained was applied to a II column and eluted with maleic acid-NaOH buffer pH 6.0 containing 5 + 10-5M ribulose diphosphate. I was obtained in 70% yield with a purity of 1100 IU/mg protein for an overall purification of 3800-fold.

TITLE: Chromatographic resolution of cobalt(III) complexes on ion-exchange cellulose
AUTHOR(S): Yoshikawa, Yuzo; Yamasaki, Kazuo
CORPORATE SOURCE: Nagoya Univ., Nagoya, Japan
SOURCE: Inorganic and Nuclear Chemistry Letters (1968), 4(12), 697-700
CODEN: INUCAF; ISSN: 0020-1650
DOCUMENT TYPE: Journal
LANGUAGE: English

AB Cationic and anionic exchange celluloses, diethylaminoethyl cellulose (I) and phosphorylated cellulose (II), resp.,

were used successfully for the resolution of both cationic and anionic Co(III) complexes, resp. Thus $K[CoL] \cdot 2-H_2O$ ($H_4L = EDTA$) (42 mg.) in 10 ml. H_2O was passed through a column packed with I which was previously converted to the Cl-form with N HCl. The adsorbed complex was eluted with 0.02N HCl at a rate of 0.2 ml./min.; the effluent was divided into 3-ml. fractions. Fraction nos. 1-11 showed no optical rotation, while fraction nos. 12-16 showed pos. rotations with the maximum value $[M]_{25546} = 1070^\circ$ for the 13th fraction which corresponded to 25% resolution. The subsequent fractions showed the neg. rotations with the maximum $[M]_{25546} = -2180^\circ$ for the 22nd fraction, corresponding to 51% resolution. Similarly, the resolution of $[Co(en)_3]Cl_3$ on II was carried out. Fraction nos. 1-5 showed the neg. rotation with the maximum value $[M]_{25D} = -41^\circ$ for the 1st fraction. Fraction nos. 6-10 showed no rotation, while fraction nos. 11-51 and nos. 52 and 53 eluted by 2N HCl showed pos. rotation; the 53rd fraction showed the maximum rotation $[M]_{25D} = 56^\circ$. The Co(III) complexes of aminodiacetic acid (ida) and diethylenetriamine (dien), $K[Co(ida)_2]$ and $[Co(dien)_2]Br_3$, resp., were also resolvable.

- ☐ 8. Production of cellulose II by Acetobacter xylinum in the presence of 2,6-dichlorobenzonitrile
Xiaochun, Y. / Atalla, R.H., *International Journal of Biological Macromolecules*, Aug 1996
 This report provides X-ray diffraction and Raman spectral evidence that, when 2,6-dichlorobezonitrile is present in the culture medium, Acetobacter xylinum, which is a model system for investigation of the biosynthesis of native...
